

Advanced Planning & Scheduling for Tank Transport

Operating tank-tainer & trailer logistics requires strong compliance-support. The planning is driven by many complex and different rules by law, industry and shippers. Creating and operating a robust, real time planning, avoiding any risk, is key.

Ab Ovo's APS-solution for tank-tainer & trailers has embedded compliance in an optimal way. It means that the planner can focus on customer-dedication and cost-competitiveness, while all the rules and obligations are integrated in the planning via knowledge tables.
